

Compute		
Category	Service	Description
Instances (Virtual machines)	EC2	Provides secure, resizable compute capacity in the cloud. It makes web-scale cloud computing easier for developers. EC2
	EC2 Spot	Run fault-tolerant workloads for up to 90% off. EC2Spot
	EC2 AutoScaling	Automatically add or remove compute capacity to meet changes in demand. EC2_AutoScaling

Compute (cont)		
	Lightsail	Designed to be the easiest way to launch & manage a virtual private server with AWS. An easy-to-use cloud platform that offers everything need to build an application or website. Lightsail
	Batch	Enables developers, scientists, & engineers to easily & efficiently run hundreds of thousands of batch computing jobs on AWS. Fully managed batch processing at any scale. Batch
Containers	Elastic Container Service (ECS)	Highly secure, reliable, & scalable way to run containers. ECS

Compute (cont)		
	Elastic Container Registry (ECR)	Easily store, manage, & deploy container images. ECR
	Elastic Kubernetes Service (EKS)	Fully managed Kubernetes service. EKS
	Fargate	Serverless compute for containers. Fargate
Serverless	Lambda	Run code without thinking about servers. Pay only for the compute time you consume. Lambda
Edge and hybrid	Outposts	Run AWS infrastructure & services on premises for a truly consistent hybrid experience. Outposts
	Snow Family	Collect and process data in rugged or disconnected edge environments. SnowFamily

Compute (cont)

Wavelength	Deliver ultra-low latency application for 5G devices. Wavelength
VMware Cloud on AWS	Innovate faster, rapidly transition to the cloud, & work securely from any location. VMware_On_AWS
Local Zones	Run latency sensitive applications closer to end-users. LocalZones

Storage

Service	Description
AWS S3	S3 is the storehouse for the internet i.e. object storage built to store & retrieve any amount of data from anywhere S3
AWS Backup	AWS Backup is an externally-accessible backup provider that makes it easier to align & optimize the backup of data across AWS services in the cloud. AWS_Backup

Storage (cont)

Amazon EBS	Amazon Elastic Block Store is a web service that provides block-level storage volumes. EBS
Amazon EFS Storage	EFS offers file storage for the user's Amazon EC2 instances. It's kind of blob Storage. EFS
Amazon FSx	FSx supply fully managed 3rd-party file systems with the native compatibility & characteristic sets for workloads. It's available as FSx for Windows server (Fully managed file storage built on Windows Server) & Lustre (Fully managed high-performance file system integrated with S3). FSx_Windows FSx_Lustre
AWS Storage Gateway	Storage Gateway is a service which connects an on-premises software appliance with cloud-based storage. Storage_Gateway

Storage (cont)

AWS DataSync	DataSync makes it simple & fast to move large amounts of data online between on-premises storage & S3, EFS, or FSx for Windows File Server. DataSync
AWS Transfer Family	The Transfer Family provides fully managed support for file transfers directly into & out of S3. Transfer_Family
AWS Snow Family	Highly-secure, portable devices to collect & process data at the edge, and migrate data into and out of AWS. Snow_Family

Classification:

Object storage: S3

File storage services: Elastic File System, FSx for Windows Servers & FSx for Lustre

Block storage: EBS

Backup: AWS Backup

Data transfer:

Storage gateway --> 3 types: Tape, File, Volume.

Transfer Family --> SFTP, FTPS, FTP.

Edge computing and storage and Snow

Family --> Snowcone, Snowball,

Snowmobile

Developer Tools (cont)

Cloud Development Kit	Cloud Development Kit (AWS CDK) is an open source software development framework to define cloud application resources using familiar programming languages. CDK
CodeCommit	CodeCommit is a version control service that enables the user to personally store & manage Git archives in the AWS cloud. CodeCommit
CodeDeploy	CodeDeploy is a fully managed deployment service that automates software deployments to a variety of compute services such as EC2, Fargate, Lambda, & on-premises servers. CodeDeploy
CodePipeline	CodePipeline is a fully managed continuous delivery service that helps automate release pipelines for fast & reliable app & infra updates. CodePipeline

Developer Tools (cont)

CodeStar	CodeStar enables to quickly develop, build, & deploy applications on AWS. CodeStar
CLI	AWS CLI is a unified tool to manage AWS services & control multiple services from the command line & automate them through scripts. CLI
X-Ray	X-Ray helps developers analyze & debug production, distributed applications, such as those built using a microservices architecture. X-Ray

Migration & Transfer services

Service	Description
Migration Evaluator	Build a data-driven business case for AWS. ME
Migration Hub	Migration Hub provides a single location to track the progress of app migrations across multiple AWS & partner solutions. MigrationHub

Migration & Transfer services (cont)

Application Discovery Service	Application Discovery Service helps enterprise customers plan migration projects by gathering information about their on-premises data centers. ADS
Server Migration Service (SMS)	SMS is an agentless service which makes it easier & faster to migrate thousands of on-premises workloads to AWS. SMS
Database Migration Service (DMS)	DMS helps migrate databases to AWS quickly & securely. DMS
CloudEndure Migration	CloudEndure Migration simplifies, expedites, & reduces the cost of cloud migration by offering a highly automated lift-&-shift solution. CloudEndure
VMware Cloud on AWS	Refer compute section.
DataSync	Refer storage section.
Transfer Family	Refer storage section.
Snow Family	Refer storage section.

Managed Services Operate your AWS infrastructure on your behalf. ManagedServices

X Ray X-Ray

Recommend security best practices

Turn on multifactor authentication for the "root" account

Turn on CloudTrail log file validation.

Enable CloudTrail multi-region logging.

Integrate CloudTrail with CloudWatch.

Enable access logging for CloudTrail S3 buckets.

Enable access logging for Elastic Load Balancer (ELB).

Recommend security best practices (cont)

- Enable Redshift audit logging.
- Enable Virtual Private Cloud (VPC) flow logging.
- Require multifactor authentication (MFA) to delete CloudTrail buckets
- Enable CloudTrail logging across all AWS.
- Turn on multi-factor authentication for IAM users.
- Enable IAM users for multi-mode access.
- Attach IAM policies to groups or roles
- Rotate IAM access keys regularly, and standardize on the selected number of days
- Set up a strict password policy.
- Set the password expiration period to 90 days and prevent reuseCustomer Visual-force pages with standard headers
- Don't use expired SSL/TLS certificates
- User HTTPS for CloudFront distributions
- Restrict access to CloudTrail bucket.
- Encrypt CloudTrail log files at rest
- Encrypt Elastic Block Store (EBS) database.
- Provision access to resources using IAM roles.
- Ensure EC2 security groups don't have large ranges of ports open
- Configure EC2 security groups to restrict inbound access to EC2.
- Avoid using root user accounts.
- Use secure SSL ciphers when connecting between the client and ELB.
- Use secure SSL versions when connecting between client and ELB.

Recommend security best practices (cont)

- Use a standard naming (tagging) convention for EC2.
- Encrypt RDS.
- Ensure access keys are not being used with root accounts.
- Use secure CloudFront SSL versions.
- Enable the require_ssl parameter in all Redshift clusters.
- Rotate SSH keys periodically.
- Minimize the number of discrete security groups.
- Reduce number of IAM groups.
- Terminate unused access keys
- Disable access for inactive or unused IAM users
- Remove unused IAM access keys
- Delete unused SSH Public Keys
- Restrict access to AMIs.
- Restrict access to EC2 security groups.
- Restrict access to RDS instances.
- Restrict access to Redshift clusters.
- Restrict outbound access.
- Disallow unrestricted ingress access on uncommon ports.
- Restrict access to well-known ports such as CIFS, FTP, ICMP, SMTP, SSH, Remote desktop
- Inventory & categorize all existing custom apps by the types of data stored, compliance requirements & possible threats they face.
- Involve IT security throughout the development process.

Recommend security best practices (cont)

- Grant the fewest privileges as possible for application users
- Enforce a single set of data loss prevention policies across custom applications and all other cloud services.
- Encrypt highly sensitive data such as protected health information (PHI) or personally identifiable information (PII).
